# Alexa for Business

## Leverage Alexa to do more at work

Voice is one of the most natural ways for people to interact with one another. Alexa uses the power of voice to give users more intuitive interactions with the technology they depend on, whether they are in their living rooms or in the workplace.

Today, people spend too much of their day on tedious tasks at work, like managing their calendars, dialing in to meetings, or searching for information. But Amazon Alexa can help solve this problem by acting as an intelligent assistant at work. Alexa lets people use their voice to interact with technology so they can spontaneously ask questions in a way that feels natural. Alexa can help people take care of these tasks just by asking. Alexa can help people stay organized and focused on the things that matter, whether they are working in their office or at home.
