

Amazon **AppStream 2.0**

Amazon AppStream 2.0

Securely deliver desktop applications to any computer

Amazon AppStream 2.0 is a fully managed application streaming service. You manage your desktop applications on AppStream 2.0 and deliver them to a browser on any computer. AppStream 2.0 is built on AWS, so you benefit from a data center and network architecture designed for the most security-sensitive organizations. Each user has a fluid and responsive experience with your applications, including GPU-intensive 3D design and engineering ones, because your applications run on virtual machines (VMs) optimized for specific use cases and each streaming session automatically adjusts to network conditions. Enterprises can use AppStream 2.0 to simplify application delivery and complete their migration to the cloud. Educational institutions can provide every student access to the applications they need for class on any computer. Software vendors can use AppStream 2.0 to deliver trials, demos, and training for their applications with no downloads or installations.
