

Amazon **Simple** **Notification Service (SNS)**

Amazon Simple Notification Service (SNS)

Fully managed pub/sub messaging for microservices, distributed systems, and serverless applications

Amazon Simple Notification Service (SNS) is a durable, secure, fully managed pub/sub messaging service that enables you to decouple microservices, distributed systems, and serverless applications. Amazon SNS provides topics for high-throughput, push-based, many-to-many messaging. Using Amazon SNS topics, your publisher systems can fan out messages to a large number of subscriber endpoints for parallel processing, including Amazon SQS queues, AWS Lambda functions, and HTTP/S webhooks. You can get started with Amazon SNS in minutes by using the AWS Management Console, AWS Command Line Interface (CLI), or AWS Software Development Kit (SDK).
